Advisory Editor, Soviet Physics – Solid State: Leonid V. Azaroff, Institute of Materials Science, University of Connecticut, Storrs, Connecticut 06268.

Soviet Physics – Solid State is a monthly journal published by the American Institute of Physics for the purpose of making available in English reports of current Soviet research in physics as contained in the journal "Solid State Physics" of the Academy of Sciences of the USSR. The Russian original and the translation both began with the 1959 issues.

The American Institute of Physics and its translators propose to translate faithfully all of the scientific material in the original articles. The views expressed in the translations are therefore those of the original authors and not those of the translators nor of the American Institute of Physics.

On the conviction that dissemination of the results of research is invaluable to the advancement of science, this translation and publication project was undertaken by the American Institute of Physics as a significant service to the physics community, not only in the United States but also in many other countries. The U. S. National Science Foundation encouraged the project initially and supplied partial financial support on a declining scale until the AIP translation program became self-supporting in July 1964.

The transliteration of the names of Russian authors follows essentially the standard agreed upon by the British Standards Institute and the American National Standards Institute (Committee Z39).

One volume is published annually, beginning with the July issue.
